

FORE-END RAIL

The Cadex Fore-end Rail provides users of the Accuracy International AE Rifle with a world-class mount for inline night vision, lasers and accessories. Designed for the Accuracy International Chassis System (AICS), it provides Mil Std 1913 rails at the 3, 12 and 9 o'clock positions. Interface rails for Remington 700 mounted in the AICS are available upon request.

Installation of the rail system employs existing AICS fore-end holes for the rail mounting hardware. The rail interfaces with the bedding block of the AICS, therefore zero retention is assured. Users can remove side rails to fit their mission requirements.

The rail design permits the sniper to install and remove night vision devices without adjusting zero of their primary sniper optic; rail dimensions place the sniper optic and attached night vision in the same plane. Side rails have locating pins to prevent shifting thereby providing excellent zero retention of side mounted lasers. This rail system is a zero minute design (custom MOA available on request).

This robust rail is machined from 6061 T6 aluminum anodized for a long lasting finish.

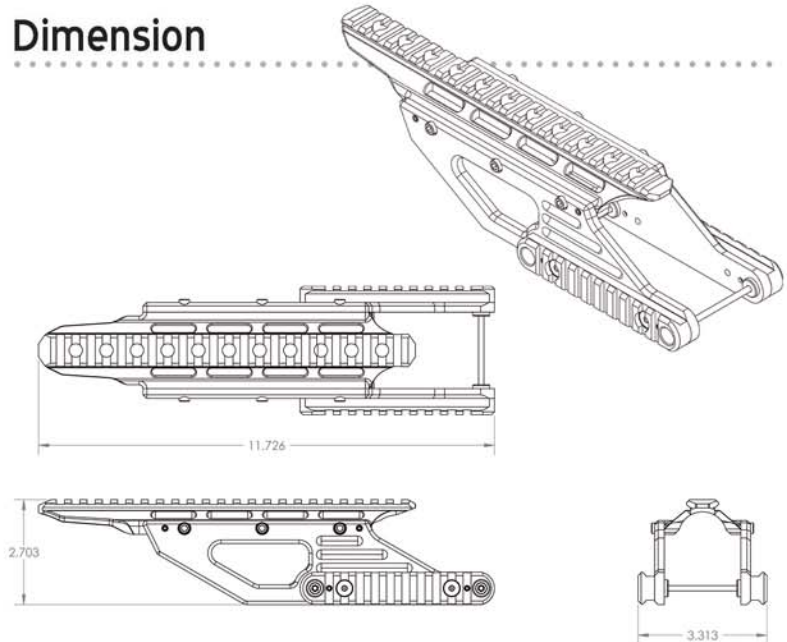

This mount is designed to provide snipers a precision electro-optic mount for the Accuracy International weapon.

Specifications

- Elevation MOA : 0 MOA (Custom MOA upon request)
- Weight : 525.0 grams / 18.5 ounces
- Interface : Fits Accuracy International AE Rifle
- Colors : Black anodized
