

## MINI RED DOT SIGHT/FLASHLIGHT MOUNT

This Cadex mount provides the operator with a light-weight interface for their mini red dot sight and flashlight. This offset sight mount allows the shooter to maintain cheek-weld during transition from their main optic to CQB optic. The Cadex mount requires that the weapon is canted only 30 degrees, resulting in faster transition to the mini red dot sight.

This combination mount can be used by left or right handed shooters, placing the sight in the 1 or 11 o'clock position, and flashlight at 5 or 7 o'clock. With the mini red dot sight and flashlight on the same side of the weapon, this mount permits a smoother weapon profile; also with only one mount for two accessories, it keeps weapon weight down.

In situations where the shooter requires hand held use of a flashlight, this mount has a quick release for the flashlight; the quick release latch is functioned with one hand.

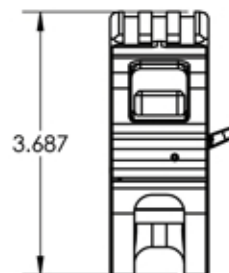

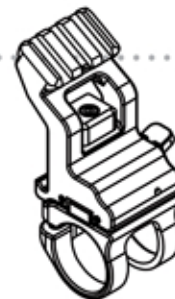

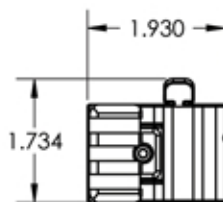

This robust sight/flashlight mount is made of aluminum to minimize weight and fits most tactical flashlights available (different mounting options available upon request). Designed and manufactured in Canada, the Cadex Mini Red Dot Sight/Flashlight Mount provides the shooter with a world class accessory mounting capability.

## Specifications

Material	: Aluminum
Weight	: 120 grams / 4.2 ounces
Rail angle from horizontal	: 30 degrees
Flashlight hole diameter	: Max. 28,6mm / 1.14inches Min 24.8mm / 0.98inches
Colors	: Black anodized
